

Instruction Sheet mod. (19)TABS20.USB

To prepare the TABLETSHUTTLE to accommodate your iPads or Tablets please follow these instructions

1. Shorten the length of all the USB cords to approximately 45 cm. / 18 in. by bundling the loose cable towards the connector end as shown in the photo.

You may use cable ties to fix the cables to the desired length.

2. Connect all the USB cords to the chargers by leading them beneath, towards the iPads area, inserting them in each foam cable fissure. Secure the loose end of the cables into their respective slots, leaving approximately 15 cm/ 6 in. of length at the upper connector end.

3. Insert the tablets in their slots and connect them all to recharge them.

4. Connect the power cords on one side to the USB chargers, on the other to the electrical outlets. Then power up by switching on the 2 units.

5. OPTIONAL:
The power cords can be pulled out, through the hole provided in the right side, if you require to recharge the iPads when the case is closed and secured.
