

# Instruction Sheet mod. (14)TABS20.USB.

To prepare the TABLETSHUTTLE to accommodate your iPads or Tablets please follow these instructions.

1. Shorten the length of all the USB cords to approximately 45 cm. / 18 in. by bundling the loose cable towards the connector end as shown in the photo.

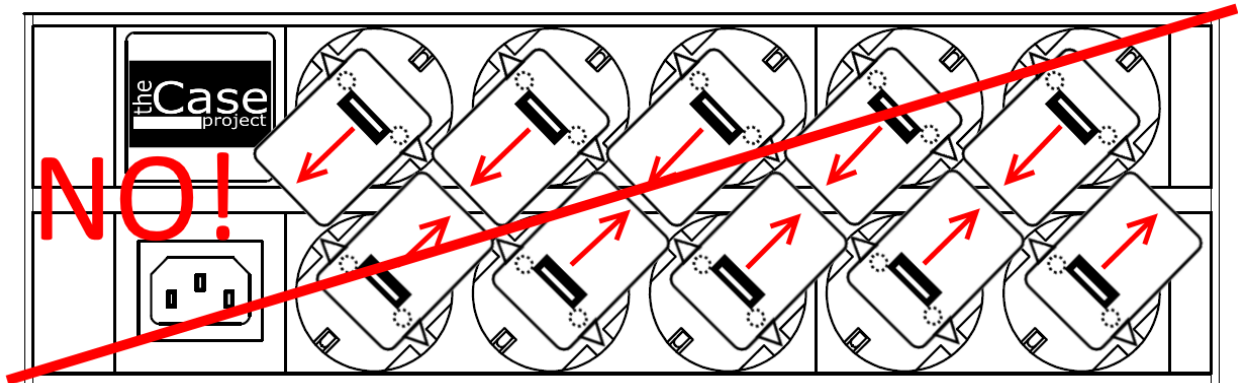

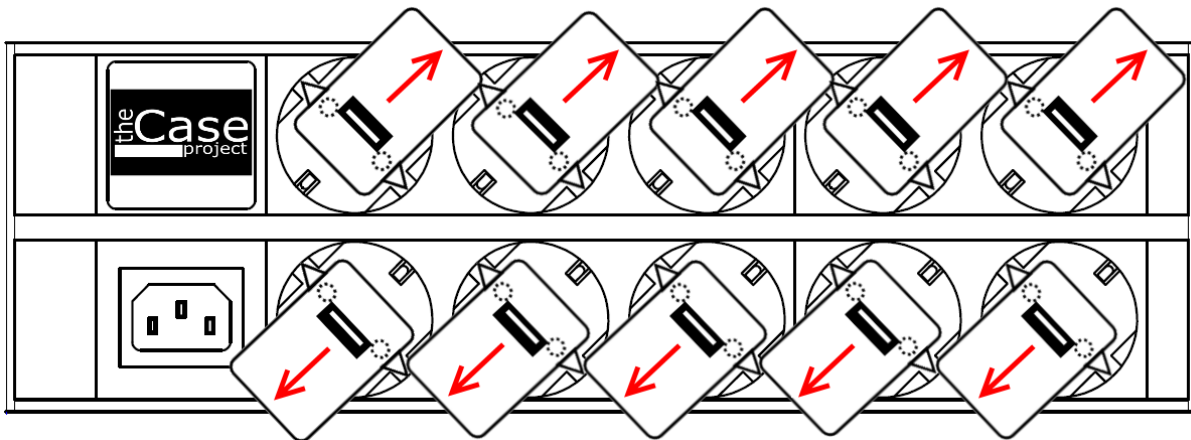

You may use cable ties to fix the cables to the desired length.

2. Entering from the top, connect all provided USB chargers to the double power strip located in the inner area of the case.

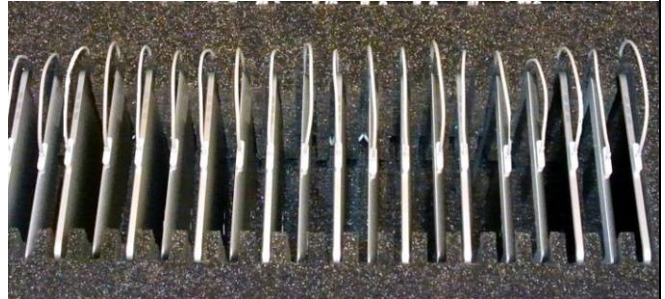

Pay attention to connect the chargers towards the outside, not the inside of the strip, to prevent interferences and possible malfunction

3. Connect all the USB cords to the chargers and lead them beneath, towards the iPads area, inserting them in each foam cable fissure. Secure the loose end of the cables into their respective slots, leaving approximately 15 cm/ 6 in of length at the upper connector end.

4. Insert the tablets in their slots and connect all cables to recharge them, as shown.

5. Connect the two power cords to the strips and lead them out of the chargers bank area.

6. Power up by connecting the two power cords to the electrical outlets.

→The power cords can be pulled through the hole provided in the right side of the case to allow the recharging of the iPads when the case is closed and secured.
